THE SMART CHOICE

- **Leads the industry as one of the easiest archiving solutions on the market**
- **Integrates powerful, rapid search functionality designed for simplicity**
- **Includes a highly-intuitive user interface that integrates with our award-winning MX Control ConsoleSM**
- **Offers the most sophisticated features at an equally-attractive price**

You actually can have your cake and eat it too...a powerful email archiving solution that isn't complex. Picking the right message archiving solution can make all the difference in the world. Choose a complicated system, and nobody will use it. Choose a system that lacks the features you need, and it's virtually useless. MX Logic® Message Archiving Service empowers your company to get legal, compliance, and IT value without the complexity rampant in most, if not all, solutions. It's affordable, easy and smart.

Many companies have a back-up system, but ask any one in the IT department and they'll tell you store-and-ignore systems are not valuable archiving solutions. These archaic systems are ineffective and costly for eDiscovery as they lack content-based search and restore functions. The security concerns with these systems mount when you realize inaccuracies such as accidental overwrites, data loss due to messages being deleted before back up and no audit trail to prevent message tampering.

Safely storing and retrieving massive volumes of messages, from both a legal and a business perspective, is a critical business practice. Ours is the easiest, most intuitive email storage solution in the messaging security market today.

Work smarter without adding any more resources. Our parallel search technology enables multiple simultaneous searches which facilitate finding specific messages quickly and accurately. Additionally, you can search within attachments that MS® Outlook® can't and empower end users with a familiar interface. MX Logic Message Archiving secures company knowledge by consolidating .pst files within a flexible platform that allows you to:

- Create searches based on message ID, attachment, sender, recipient, date range, and message size
- Search for keywords in the header, subject, body or attachment
- Select either "advanced" or "simple" search options
- Save searches for future use

“Up to 70% of business-critical information may be in an organization’s corporate messaging system.”

MX LOGIC® THREAT CENTER

“36% of decision-makers are more concerned about the need to archive email today than they were 12 months ago. Similarly, 30% are more concerned about eDiscovery issues than they were a year ago.”

MICHAEL OSTERMAN,
NETWORK WORLD

Greatest return to your IT department and company as a whole. Because along with the exclusive features and advanced functionality, the MX Logic Archiving solution will allow you to shrink MX® Exchange® databases to manageable sizes, restore messages in seconds and enhance business continuity. You will benefit from:

- Free set up
- No upgrade fees
- Complimentary 24/7 customer support
- No long-term commitment (month-to-month contracts)
- Unlimited storage at no extra charge
- Optional retention periods for 1, 3, 5 or 7 years
- Bundled pricing or stand-alone service

Security you can trust. Less than one-third of companies using traditional tape backup systems utilize offsite locations — equating to an extremely high risk of data loss due to a disaster. The MX Logic managed services archiving solution utilizes dual datacenters with unlimited storage capacity at no extra charge. Furthermore, to stay in compliance with HIPAA, Sarbanes-Oxley, and FRCP, and to keep employees safe, businesses must now recognize that there is more to archiving than simple storage. Our solution also includes:

- Tamperproof read-only storage
- Automatic quality verification
- Dual commit message capture
- Auditable message serialization
- Searchable data, attachments, and metadata
- Transport and storage encryption

Expand your IT reach with a managed services solution that is integrated, powerful and economical. Message archiving is integrated with our award-winning MX Control Console™ – the same interface that supports the MX Logic® Email Defense Service and MX Logic® Web Defense Service – allowing you to benefit from:

- No hardware or software installations
- Easier, hassle-free administration
- Archived messages that automatically import upon activation
- Streamlined workflow and management with a single Web-based sign-on
- A shorter learning curve and more intuitive functionality
- Multiple shared features like data exporting, email configuration, connectivity options, and more

MX LOGIC: THE CHOICE FOR MANAGED SECURITY SERVICES.
